Reasons for Allowance

None of the prior art of record disclose or suggest a method of at least treating or preventing at least one light responsive disorder in at least one mammal, said method comprising the steps as claimed. The examiner agrees with the remarks filed in the above referenced response that the Searfoss et al. reference teaches employing a spectral composition that is individually determined based on subjective responses of the specific human being treated, namely inducing a nominally homeostatic state as a direct result of the exposure of the individual's eyes to the selected electromagnetic energy pattern. The conclusion revealed that substantially monochromatic green light (510-575 nm) was preferred.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
